

PRINCE BAGHEL

Full Stack Engineer

Bengaluru, India | +91 63957 98956 | pkbghl2@gmail.com

linkedin.com/in/mprincebaghel | github.com/mprinceb

SUMMARY

Full-stack engineer with 3 years building production systems end to end — backend services, automation pipelines, and the React interfaces on top. Strong in Node.js/TypeScript and Python, with hands-on experience in distributed systems, ERP/business-rule automation, CI/CD, and reliability-focused debugging.

SKILLS

Languages: JavaScript (Node.js), TypeScript, Python, SQL, Bash

Backend: FastAPI, Express.js, REST API design, background jobs, durable workflows, RBAC, OAuth2/Keycloak

Frontend: React, React Native, Next.js, React Query, Three.js

Databases: Postgres, MySQL, Redis, SQLite (encrypted); Alembic / Knex migrations

Platforms: Frappe / ERPNext, Electron (main process), Cloudflare R2 / S3-compatible storage

DevOps: Docker, Kubernetes, ArgoCD, Terraform, CI/CD, Linux, systemd, Nginx, Helm, ELK

Concepts: Distributed systems, event-driven architecture, idempotency, audit/RBAC, workflow automation

EXPERIENCE

Software Engineer — Technoculture Research

June 2023 – Present

Bengaluru, India (Remote)

SXD — Distributed Robotics Data-Processing Platform

- Built backend/platform services that ingest robot recordings and orchestrate multi-stage CPU/GPU processing with idempotent, recoverable workflows; FastAPI on Postgres/Alembic; multi-customer delivery to object storage.
- Designed idempotent artifact processing keyed on deterministic identifiers (episode ID, stage, version, input fingerprint), enabling safe reruns and clean recovery from partial failures.

FirstCheck — Clinical Desktop Platform (Electron)

- Developed IPC services, encrypted SQLite persistence, schema migrations, and report/export flows; integrated a deterministic TypeScript risk-calculation engine with auditable outputs and RBAC.
- Built LIS/analyzer connectivity with message framing, CRC/retry handling, and Node/Python native serial bindings; designed ERP-backed licensing and node-locking.

vv-ERP — ERPNext/Frappe Automation

- Automated CRM, payroll, payment, accounting, and stock workflows in ERPNext/Frappe; migrated payroll & HRMS from Keka to ERPNext; processed 300,000+ payment entries.
- Designed CI/CD pipelines and automated deployments on Kubernetes + ArgoCD; ran multi-bench deployments with Nginx and ELK monitoring; secure SSO via Keycloak/OAuth2.
- Mentored interns on Frappe/ERPNext and Python with a structured training program.

Frontend Developer — AgSpeak

May 2023 – Dec 2024

Guwahati, India (Remote, Part-time)

- Improved UX on enterprise dashboards with React, React Router, and React Query; implemented caching in the AgSpeak React Native mobile app to boost performance.
- Built a 360° farm viewer with Three.js, adding interactive 3D visualization to the product.

EDUCATION

Bachelor of Computer Applications (BCA) — Dharma Samaj College, Aligarh

Jul 2020 – Oct 2023

Aggregate: 75%
